Test Automation using CAFÉ Next

What is CAFÉ Next?

An unified test automation framework

- Progression + Regression automation
- Reduced automation effort using a Lean automation team
- Enables Shift Left by adopting automation much earlier in lifecycle
- Faster time to market and increased ROI
- Increased reusability and minimized maintenance effort
- **Easy Automation** : Ability to develop test cases using interface by manual testers with minimal automation knowledge
- Support for data-driven testing
- RTS based technique helps in calculating effort estimation, productivity
- Easy to maintain, scalable, portable flexible framework

Test Case Authoring

- Component based test design technique
- Build test cases using components
- Integration with Quality Center/ ALM

Automated Script Generation

- Automatic script development
- Ensures consistency in script coding standard
- Uses core features of HP QTP & integrates with QC
  – Scripts can be executed from QTP or QC directly
